

In order to maximize competition for (b) (7)(F) space requirements, several steps were taken:

- Properties were surveyed online using CoStar, a commercial real estate listing website
- An advertisement was posted on SAM.gov on October 13, 2022 with expressions of interest due on November 4, 2022 as well as on August 9th with final proposal revisions due on August 22nd. In Addition, the GSA Broker Contractor, (b) (7)(F) spoke to brokers in the market and sent emails to local brokers as well to vet all viable relocation options in the delineated area

In response to these efforts, one property was determined to be potentially capable of meeting the Government's requirements. The market survey was conducted, which included the following properties within the delineated area:

(b) (7)(F)

Addresses 2 and 3 listed above are both located in flood plains and did not meet the space requirements (See PNM). Address 1 listed above is in a 1 percent-annual-chance floodplain but fully meets the Government's space requirements.

4. Evaluation of Identified Alternatives.

Based on the research conducted which identified only the current building can meet the Government's needs for this procurement, it is unlikely that further research or another market survey would yield additional results more favorable for competition.

5. Conclusion.

(b) (7)(F) is the only practicable alternative within the delineated area. Much of the delineated area is located in a 1 or 0.2 percent-annual-chance floodplain. Efforts were made throughout the procurement to obtain all possible options for (b) (7)(F) requirement. However, there is only one option that will be able to fulfill the requirement, which is located in the 1 percent-annual-chance floodplain.

Based on the location analysis conducted by the (b) (7)(F) it is in the AGENCY's best interest to be located at (b) (7)(F) in order to accomplish its mission.
